

THE NATURAL BEAUTY OF AMERICANA™ THERMALLY MODIFIED WOOD

Americana Thermally Modified Wood is domestically sourced, responsibly harvested, and manufactured in Pennsylvania. Our Pennsylvania thermally modified hardwood undergoes a natural, non-toxic process that slowly cooks the wood causing changes on a molecular level by removing all the moisture. The process produces naturally durable wood that is permanently resistant to water, insects, and decay.

**THERMAL
MODIFICATION
IS OUR
SECRET TO...**

- Resistance to Rot
- Increased Lifespan
- Class 1 Durability (25+ years)
- Wildland-Urban Interface (WUI) Approved

Thermally modified wood provides a luxurious and timeless look that can easily stand out amidst other decking options. The process gives the wood a rich, deep brown appearance with an unexpected tropical look. To maintain this beautiful color, UV protectant can be applied - otherwise, the wood will naturally silver over time, which can also add to its unique aesthetic.

REAL WOOD FOR THE REAL WORLD

DECKING • SIDING • PORCH FLOORING

AMERICANA™ THERMALLY MODIFIED HARDWOOD

DECKING

Americana™ Thermally Modified Wood Decking designs are easy to work with. We use standard symmetrical profiles which can be used with off-the-shelf hidden fasteners. You choose which side of the board you see, and with our structural end joint, the deck can be laid like flooring, with joints floating anywhere between joists. Less waste, less time.

Our Thermally Modified Wood Decking is offered in 6' to 12' long and in 1' increments, with maximum 5%, 3'/4'/5' long nested in bundles. Optionally, it can be cut on 16" increments.

AMERICANA™ THERMALLY MODIFIED HARDWOOD

SIDING & RAINSCREEN

Americana™ Thermally Modified Wood Siding & Rainscreen is 100% grown, harvested, and manufactured in Pennsylvania, the heart of the American hardwood forests. We offer a variety of profiles to get the look you want, whether it's vertical or horizontal. Go with Oak or Ash for a bold, pronounced grain, or Poplar for the smooth look. We are the manufacturer, so it can be completely customized to fit your taste.

Our Thermally Modified Wood Siding & Rainscreen is offered in 6' to 12' long, and in 1' increments.

AMERICANA™ THERMALLY MODIFIED HARDWOOD

PORCH FLOORING

+ CUSTOM APPLICATIONS

Our T&G Microbevel allows the wood to adjust to wet/dry cycles without cupping or scalloping. Our proprietary structural end joint allows you to span greater distances than traditional butt-end Porch Flooring. So why stop at 8' or 10'? Extend your porch as far as you dare, and do some real outdoor living.

Americana™ Thermally Modified Wood Porch Flooring is offered in 6' to 12' long, and in 1' increments.

ECO FRIENDLY

100% pure, natural hardwood, sustainably harvested from Pennsylvania's beautiful, vast forestland.

LOW MAINTENANCE

It's up to you! Apply a UV protectant to maintain the exotic color, or let it naturally silver.

NO CHEMICALS

Heat and steam... that's it. No plastic, oil, resin, wax, or additives. Americana is completely chemical-free and safe.

PREMIUM HARDWOOD

This isn't your grandfather's pressure-treated pine, or your parents' plastic. It's the real deal: Ash, Oak, Poplar.

EXOTIC APPEARANCE

Deep, luxurious brown maintained with UV protectant or wood silvered naturally.

LONG LIFE

Class 1 durability. First class stability. This wood isn't going anywhere.
